

Anti — Bed Bug

Protection against and
elimination of bed bugs.

- + Bed bugs can bite up to 500 times in a single night of sleep, causing you or your children immense discomfort in the form of hundreds of itchy welts.

Bed bugs seek out humans, drawn to the carbon dioxide we exhale and our body heat. The bed bug invasion of properties, including homes is increasing globally.

Bed bugs lay dormant close to where you lay down to sleep, they can bite and suck your blood for up to 10 minutes without you waking. Bed bugs can take enough blood to grow their bodies up to 3 times their own size.

When hungry, bed bugs can travel at speeds similar to cockroaches to ensure they get their share. Each adult bed bug can lay up to 8 eggs taking only 9 days to hatch.

Bed bugs are characterised by their 5mm body size, flat shape, reddish brown colour and huge mouth parts.

Bed bugs are blood sucking insects that hitch a ride on our clothes and baggage and then take up residence in mattresses, box springs, carpets, walls and like. They infest our homes, hotels, motels, apartments and backpackers.

Bed bugs may lay dormant or in a sleepy coma for up to 9 months and when they attack, leave behind itchy welts that can scar and become infected with ongoing scratching. Not to mention, they create discomfort and dissatisfied hotel guests. Bed bug infestations are extremely difficult to eradicate.
